

## PACKET SWITCHING CASE STUDY

Quantitative comparison of packet switching and circuit switching

### 1. The example:

Assumption	Suppose users share a 1 Mbps link. Also suppose that each user alternates between periods of activity, when a user generates data at a constant rate of 100 kbps, and periods of inactivity, when a user generates no data. Suppose further that a user is active only 10% of the time (and is idle during the remaining 90% of the time).
Circuit switching	100 kbps must be reserved for each user at all times. The link can support only 10 (= 1 Mbps/100 kbps) simultaneous users.
Packet switching	If there are 35 users: - The probability that 10 or fewer simultaneous user active is 0.9996 or 99.96% - The probability that there are 11 or more simultaneously active users is approximately 0.0004 (or 0.4%)

The probability of success event of “user active”  $p$ , then the  $x$  users over the total  $n$  user are active simultaneously with probability:

$$\frac{n!}{x!(n-x)!} p^x (1-p)^{(n-x)}$$

$x$  can vary between 0 to  $X=10$ , the probability is:

$$\sum_{x=0}^{10} \frac{n!}{x!(n-x)!} p^x (1-p)^{(n-x)}$$

with  $n=35$ ,  $X=10$ ,  $p=0.1$  then  $P(x \leq 10) = 0.9996$

2. Another example of shareable resource:

Assumption	Suppose users share a 1 Mbps link. Suppose there are 10 users and that one user suddenly generates one thousand 1,000-bit packets (1 mil bits), while other users remain quiescent and do not generate packets
Circuit switching	10 slots per frame and each slot consisting of 100,000 bits The active user need 10 seconds.
Packet switching	The active user can continuously send its packets at the full link rate of 1 Mbps and need only 1 second.

3. Some practice with smaller number and determine probabilities from a table.  
Assume there are 11 users, using packet switching, each requiring a bandwidth of 25Mbps must share a link of capacity 100Mbps but only needs to transmit 10 percent of the time.

Some estimation:

1. When circuit switching is used, the maximum number of users that can be supported is 4.
2. In packet switching, the maximum number of simultaneous users is 4.
3. The probability that a given (specific) user is transmitting, and the remaining users are not transmitting is  $0.1^1 * 0.9^{10} = 0.0349$
4. What is the probability that one user (any one among the 11 users) is transmitting, and the remaining users are not transmitting, determine the value from the table at  $p=0.1$ ,  $n=11$ ,  $r=1$  ( $r$  or  $x$ ) is 0.384.
5. The probability that any 4 users (of the total 11 users) are transmitting and the remaining users are not transmitting? determine the value from the table at  $p=0.1$ ,  $n=11$ ,  $r=5$  ( $r$  or  $x$ ) is 0.016.
6. The probability that more than 4 users are transmitting? We can take sum with value determining from the table at  $r=5,6,\dots,11$  but we can also calculate  $P(x \leq 4)$  then take the complement  $1 - P(x \leq 4)$   
 $P(x \leq 4)$  is the sum of value at  $r=0,1,2,3,4$  from the table:  
 $0.314+0.384+0.213+0.071+0.016=0.998$   
The answer is  $1-0.998 = 0.002$
7. Assume we need to decide the rent bandwidth to satisfy 98,5% user demand, what capacity we need to support at least? Since we accept 0.02 (or 2%) of user lost connection, we need to support the number of user at 0,1,2,3 and hence we need at least 75Mbps. The decision is supported by the probability of 3 or fewer user simultaneous active is 0.982  
( $0.314+0.384+0.213+0.071$ )
8. Assume that we are provided the communication that support  $x=6$  simultaneous users, with the quality of service in our client contract is 95%. What is the total number of users that we can provide the service in order to maintain our service quality guarantee.  
\*Hint\* student self-study by figuring out the set of different user  $n=6,7,\dots$  to estimate the max number that still satisfy the assumed quality rate.

**Table 4** Binomial Probability Distribution  $C_{n,r} p^r q^{n-r}$ 

This table shows the probability of  $r$  successes in  $n$  independent trials, each with probability of success  $p$ .
